THE FOLLOWING GOVERNMENT DEPARTMENTS AND SCIENTIFIC AND INDUSTRIAL organizations were officially represented on the committee entrusted with the preparation of this standard:

Aluminium Development Council
Australian Chamber of Commerce
Associated Chambers of Manufactures of Australia
Australian and New Zealand Railways Conferences
Australian Institute of Metals
Australian Liquefied Petroleum Gas Association
Australian Mines and Metals Association
Australian Sugar Refiners
Australian Welding Institute
Australian Welding Research Association
Bureau of Steel Manufacturers of Australia
Copper and Brass Information Centre
Council of Fire and Accident Underwriters
Department of Mines
Department of the Interior
Department of the Navy
Department of Shipping and Transport
Department of Supply
Electricity Supply Association of Australia
Lloyds Register of Shipping
Metal Trades Industry Association of Australia
Petroleum Refining Engineers Advisory Committee
Piping Manufacturers and users
Queensland Society of Sugar Cane Technologists
Society of Mechanical Engineers of Australia
State Departments of Labour and Industry and Machinery Inspection
The Institution of Engineers, Australia
Universities and Technical Colleges

This standard, prepared under the direction of Committee ME/1, Boilers and Unfired Pressure Vessels, was approved on behalf of the Council of the Standards Association on 21 December 1972.

To keep abreast of progress in industry, Australian Standards are regularly reviewed. Suggestions for improvement to published standards, addressed to the headquarters of the Association are welcomed.

This standard was issued in draft form for public review as Doc. 1469.

PREFACE

This standard was prepared by a subcommittee acting under the Association's Boilers and Unfired Pressure Vessel Committee. It is the second comprehensive code of rules for pressure piping to be prepared, rules for ferrous piping being given in AS CB18, Part I.

The metric units adopted in this code are those of the International System (SI). Values for pressure and stress are given in pascals (Pa) (or multiples and sub-multiples thereof) which is a special name recommended by the International Committee on Weights and Measures for the unit newton per square metre (N/m^2).

Throughout the code, the standard values of temperature are expressed in Celsius degrees.

This code is being issued in the knowledge that, because of limited experience in some sections, rules have been difficult to formulate, and the code is therefore likely to require early amendment in the light of experience in its application.

Attention is drawn to the fact that this code requires reference to a wide range of ancillary specifications and codes for materials and components. These are listed in Section 2.
