New Zealand Health Information Foundation
Pfizer
Pharmaceutical and Electronic Commerce
Royal Australian College of General Practitioners
Royal Australian and New Zealand College of Obstetricians and Gynaecologists
Roysim Services
See Beyond
Tradegate ECA

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

This Standard was issued in draft form for comment as DR 03073.

PREFACE

This document has been prepared by the Australian members of the Joint Standards Australia/Standards New Zealand IT-014 Health Informatics committee in response to the Commonwealth Government's objectives for National Standards within the Health sector. After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this standard as an Australian Standard rather than an Australian/New Zealand Standard.

The objective of this Standard is to provide messaging guidelines for electronic hospital supply chains in order to support the formal collection, storage and transmission of data within hospital electronic supply chains.

It is anticipated that this Standard will reduce the number of different systems needed to transact business, providing a framework for trading partners to share information, irrespective of organizational changes or differences which in turn will reduce administrative costs related to business transactions.

It is the fourth part in a series of documents dealing with health supply chain messaging as follows:

AS		
5023	Health supply chain messaging	
5023.1	Part 1:	Messaging rules and process logic
5023.2	Part 2:	Datasets
5023.3	Part 3:	Messaging rules and process logic—Secondary transactions
5023.4	Part 4:	Dataset content—Secondary transactions (this Standard)

This Standard utilizes notes to some of the clauses. They are designated Note 1, Note 2, and so on, and are set in smaller point size, immediately following the clause. These Notes are for information and guidance only and compliance with them is not a requirement of the Standard.

Statements expressed in mandatory terms in notes to tables are deemed to be requirements of this Standard.
