AS/NZS 4364:1996

Australian/New Zealand Standard®

Adhesives, phenolic and aminoplastic, for load-bearing timber structures—Classification and performance requirements

[Based on BS EN 301:1992 and BS EN 302, Part 1—4:1992]

This is a free page sample. Access the full version online.

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TM/4, Glued Timber Products. It was approved on behalf of the Council of Standards Australia on 19 December 1995 and on behalf of the Council of Standards New Zealand on 4 December 1995. It was published on 5 April 1996.

The following interests are represented on Committee TM/4:

Glued Laminated Timber Association of Australia
Housing Industry Association of Australia
Master Builders Australia
Monash University, Melbourne, Australia
National Association of Forest Industries of Australia
New Zealand Adhesives Industry
New Zealand Forest Research Institute Ltd
New Zealand Timber Certification Board
New Zealand Timber Industry Federation
Structural Engineered Timber Manufacturers Association of New Zealand
State Forests of New South Wales, Australia
University of Auckland, New Zealand

Review of Standards. To keep abreast of progress in industry, Joint Australian/New Zealand Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Joint Standards and related publications will be found in the Standards Australia and Standards New Zealand Catalogue of Publications; this information is supplemented each month by the magazines 'The Australian Standard' and 'Standards New Zealand', which subscribing members receive, and which give details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Joint Standards, addressed to the head office of either Standards Australia or Standards New Zealand, are welcomed. Notification of any inaccuracy or ambiguity found in a Joint Australian/New Zealand Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 91057:R.

PREFACE

This Joint Standard was prepared by the Standards Australia/Standards New Zealand Joint Committee TM/4 Glued timber products. It is substantially identical to the performance based BS EN 301:1992 *Adhesives, phenolic and aminoplastic, for load-bearing timber structures: Classification and performance requirements* and BS EN 302:1992 *Adhesives for load-bearing timber structures: Test methods* Parts 1 to 4 which have been amended only where necessary to comply with Australian and New Zealand requirements. It is issued as a Joint Standard under the terms of the Active Cooperation Agreement between Standards Australia and Standards New Zealand.

© Copyright — STANDARDS AUSTRALIA/STANDARDS NEW ZEALAND

Users of Standards are reminded that copyright subsists in all Standards Australia and Standards New Zealand publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia or Standards New Zealand may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia or Standards New Zealand. Permission may be conditional on an appropriate royalty payment. Australian requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia. New Zealand requests should be directed to Standards New Zealand.

Up to 10 percent of the technical content pages of a Standard may be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia or Standards New Zealand.

Inclusion of copyright material in computer software programs is also permitted without royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia or Standards New Zealand at any time.

CONTENTS *Page*

1 SCOPE 5
2 NORMATIVE REFERENCES 5
3 DEFINITIONS 5
3.1 Aminoplastic resin 5
3.2 Phenolic resin 5
3.3 Polycondensation adhesive 5
4 CLASSIFICATION 5
5 REQUIREMENTS 6
5.1 General 6
5.2 Tensile shear test 6
5.3 Delamination test 7
5.4 Fibre damage test 8
5.5 Shrinkage test 8
6 CERTIFICATE OF CONFORMANCE 8
7 ADDITIONAL INFORMATION 8
7.1 General description of adhesive as received 8
7.2 Physical properties of adhesive prepared for use 8
7.3 Use of the adhesive 8

APPENDICES

A TREATMENTS PRIOR TO SHEAR TEST (Normative) 9
B CYCLIC TREATMENTS USED FOR THE DELAMINATION TEST (Normative) 10
C CYCLIC TREATMENT PRIOR TO THE TENSILE TEST (Normative) 11
D TREATMENT USED FOR THE SHRINKAGE TEST (Normative) 12
E ADHESIVES FOR LOAD-BEARING TIMBER STRUCTURES: TEST METHODS 13
Part 1: Determination of bond strength in longitudinal tensile shear (Normative) 13
Part 2: Determination of resistance to delamination (laboratory method) (Normative) 20
Part 3: Determination of the effect of acid damage to wood fibres by temperature and humidity cycling on the transverse tensile strength (Normative) 25
Pan 4: Determination of the effects of wood shrinkage on the shear strength (Normative) 31

TABLES

1 Adhesive types for use in different climatic conditions 6
2 Minimum tensile shear failing loads for close contact joints on beech test pieces 7
3 Requirements for resistance to delamination 7
A1 Type and duration of treatment prior to shear test 9
B1 Summary of conditions for testing resistance to delamination 10
C1 Cyclic treatment prior to the tensile test 11
E1.1 Type and duration of treatment prior to tensile shear testing 18
E2.1 Preparation of the bonded members 22
E3.1 Climatic and cyclic storage conditions 29
