Preface

This Standard was prepared by the Australian Committee MB-012, Project, programme and portfolio management.

The objective of this Standard is to describe the context in which the governance of projects, programmes and portfolios is conducted and provides guidance for the governance of projects, programmes and portfolios. This Standard can also be used for assessment, assurance or verification of the governance function for projects, programmes or portfolios.

This Standard is identical with, and has been reproduced from, ISO 21505:2017, *Project, programme and portfolio management — Guidance on governance.*

As this Standard has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms 'normative' and 'informative' are used in Standards to define the application of the appendices or annexes to which they apply. A 'normative' appendix or annex is an integral part of a Standard, whereas an 'informative' appendix or annex is only for information and guidance.
