This Australian standard was prepared by Committee EL/4, Electrical Accessories. It was approved on behalf of the Council of the Standards Association of Australia on 20 March 1984 and published on 4 June 1984.

The following interests are represented on Committee EL/4:

Association of Consulting Engineers Australia

Australian Electrical and Electronic Manufacturers Association

Confederation of Australian Industry

Department of Defence Support

Department of Public Works, N.S.W.

Department of Transport and Construction

Electrical Contractors Associations of Australia

Electrical Regulatory Authorities

Electricity Supply Association of Australia

Plastics Institute of Australia Incorporated

Railways of Australia Committee

Telecom Australia

Review of Australian Standards. *To keep abreast of progress in industry, Australian standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that standards users ensure that they are in possession of the latest edition, and any amendments thereto.*

Full details of all SAA publications will be found in the Annual List of Australian Standards; this information is supplemented each month by SAA's journal 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn standards.

Suggestions for improvements to Australian standards, addressed to the head office of the Association, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This standard was issued in draft form for comment as DR 83023.

PREFACE

This edition of this standard was prepared by the Association's Committee on Electrical Accessories to supersede AS 2053—1980.

This edition introduces a new Section 5 which specifies requirements for corrugated conduit intended for use in applications not requiring continuous flexing and having some degree of mechanical endurance, e.g. concrete pours, the following of complex profiles, or where flexibility is required. It is expected that at some later stage AS 3000 will include requirements for the installation of such conduit.

Other changes in this edition include the addition of 125 mm rigid UPVC conduit, the inclusion of minimum inside diameters of flexible conduit fittings and the updating of the flammability tests.
