This Interim Australian Standard was prepared by Committee IT/16, Private Telecommunications Networking. It was approved on behalf of the Council of Standards Australia on 6 July 1993 and published on 16 August 1993.

The following interests are represented on Committee IT/16:

AUSTEL

Australian and Overseas Telecommunications Corporation

Australian Electrical and Electronic Manufacturers Association

Australian Information Industry Association

Australian Telecommunications Users Group

Department of Defence

N.S.W. Commercial Services Group

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 91286.

PREFACE

This Interim Standard was prepared by the Standards Australia Committee on Private Telecommunications Networking. It is identical with and has been reproduced from ISO/IEC DIS 11574:1992 *Information technology—Telecommunications and information exchange between systems—Private Integrated Services Network—Circuit-mode 64 kbit/s bearer services—Service description, functional capabilities and information flows.*

The Standard is one of a series of emerging ISO/IEC Standards applicable to private integrated services networking. The series uses the ISDN concepts as developed by CCITT and is also within the framework of Standards for Open Systems Interconnection (OSI) as defined by ISO/IEC JTC 1.

Under arrangements made between Standards Australia and the international Standards bodies, ISO and IEC, as well as certain other Standards organizations, users of this Interim Australian Standard are advised of the following:

(a) Copyright is vested in Standards Australia.

(b) The number of this Interim Standard is not reproduced on each page; its identity is shown only on the cover and title pages.

(c) Where any cross-references to page numbers appear within the text, these relate to page numbering in the International Standard and are to be disregarded.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Interim Standard.

For the purpose of this Interim Standard, the ISO/IEC text should be modified as follows:

(i) *Terminology* The words 'Draft International Standard' should be replaced by the words 'Interim Australian Standard' wherever they appear.

(ii) *References* The references to International Standards should be replaced by references to the following Australian Standards:

Reference to International Standard or other publication		*Australian Standard*	
ISO/IEC		AS	
2382	Information Technology—Terminology—Part xx, Private Integrated Services Network	—	
DIS	Address, Information Technology—Private Integrated Services Network—Addressing	4134(Int)	Information technology—Telecommunications and information exchange between systems—Numbering and sub-addressing in private integrated services networks
DIS-ISDD	Information Technology—Private Integrated Services Network—Identification Supplementary Services—Specification, Functional Model and Information flows	—	

Standards Australia invites comment on this Interim Standard from persons and organizations concerned with the subject. The date for expiry of comment is 16 August 1995 at which time (or earlier) this Interim Standard will be confirmed, withdrawn or revised in the light of comments received.

During the life of this document the committee will monitor all comment as it is received.

Attention is drawn to the fact that this document is an Interim Australian Standard and should be regarded as a developmental Standard liable to future alteration.

CONTENTS

		Page
1	**Scope**	**7**
2	**References**	**7**
2.1	International Standards	7
2.2	CCITT Recommendations	7
3	**Definitions**	**8**
4	**Symbols and Abbreviations**	**8**
Section 1 : General Considerations		**9**
5	**Provision of Services by a PISN**	**9**
5.1	Bearer Services	9
5.2	Teleservices	9
5.3	Control and signalling	9
5.4	Interworking considerations	9
5.5	Service model	9
Section 2 : Service Description, (stage 1 description)		**10**
6	**Circuit mode 64 kbit/s unrestricted 8 kHz structured bearer service category**	**10**
6.1	Definition	10
6.2	Description	10
6.3	Procedures	11
6.4	Network capability for charging	11
6.5	Interworking considerations	11
6.5.1	Interworking with a public ISDN and certain other digital network	11
6.5.2	Interworking with networks supporting only a restricted digital information transfer capability	11
6.5.3	Interworking with analogue networks	11
6.6	Static Description: Service Attributes	11
7	**Circuit mode 64 kbit/s 8 kHz structured bearer service category usable for speech information transfer**	**12**
7.1	Definition	12
7.2	Description	12
7.3	Procedures	12
7.4	Network capability for charging	12
7.5	Interworking considerations	12
7.5.1	Interworking with a public ISDN and certain other Digital Networks	12
