CEMENT & CONCRETE ASSOCIATION OF AUSTRALIA

The Cement and Concrete Association of Australia is a not-for-profit organisation established in 1928 and committed to serving the Australian construction community.

The Association is acknowledged nationally and internationally as Australia's foremost cement and concrete information body – taking a leading role in education and training, research and development, technical information and advisory services, and being a significant contributor to the preparation of Codes and Standards affecting building and building materials.

The Association's principle aims are to protect and extend the uses of cement, concrete and cement-based products by advancing knowledge, skill and professionalism in Australian concrete construction and by promoting continual awareness of products, their energy-efficient properties and their uses, and of the contribution the industry makes towards a better environment.

Standards Australia

Standards Australia is an independent company, limited by guarantee, which prepares and publishes most of the voluntary technical and commercial standards used in Australia. These standards are developed through an open process of consultation and consensus, in which all interested parties are invited to participate. Through a Memorandum of Understanding with the Commonwealth government, Standards Australia is recognised as Australia's peak national standards body. Standards Australia has an important role internationally. It is responsible for ensuring that the Australian viewpoint is considered in the formulation of international standards and that latest international experience is incorporated in Australian standards. This role is vital in assisting Australian industry to compete in international markets. Standards Australia is the national member of the International Organisation for Standardisation (ISO) and the International Electrotechnical Commission (IEC).
