Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com or Standards New Zealand web site at www.standards.govt.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of Standards Australia or the New Zealand Standards Executive at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS 4266.2:2016.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TM-011, Engineered Timber Products.

This Standard supersedes the following Methods from the AS/NZS 4266 series (2004) *Reconstituted wood-based panels—Methods of Test*:

Method 19: Assessing appearance of melamine overlaid panels

Method 20: Resistance to surface abrasion (Taber abrasion test)

Method 21: Over-cure or under-cure of resin

Method 22: Porosity of laminated surface

Method 23: Resistance to steam

Method 24: Resistance to cracking

Method 25: Resistance to staining

Method 26: Resistance to dry heat

Method 27: Resistance to impact

Method 28: Bond strength of PVC films

Method 29: Heat resistance of PVC films

Method 30: Moisture resistance of finished foils

Method 31: Adhesion of paper foils by the crosscut test

Method 32: Veneer bond strength

Method 33: Veneer bond durability

The objectives of the revision of this series of test methods are—

(a) to update test methods for reconstituted wood-based panels after 10 years; and

(b) to consolidate many separate test method Standards into one document.
