Date of Issuance: January 9, 2009

The next edition of this Standard is scheduled for publication in 2011. This Standard will become effective 1 year after the Date of Issuance. There will be no addenda issued to this edition.

ASME issues written replies to inquiries concerning interpretations of technical aspects of this Standard. Interpretations are published on the ASME Web site under the Committee Pages at http://cstools.asme.org as they are issued.

ASME is the registered trademark of The American Society of Mechanical Engineers.

This code or standard was developed under procedures accredited as meeting the criteria for American National Standards. The Standards Committee that approved the code or standard was balanced to assure that individuals from competent and concerned interests have had an opportunity to participate. The proposed code or standard was made available for public review and comment that provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not "approve," "rate," or "endorse" any item, construction, proprietary device, or activity.

ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor assume any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

No part of this document may be reproduced in any form,
in an electronic retrieval system or otherwise,
without the prior written permission of the publisher.

CONTENTS

Foreword v
Committee Roster vi
Correspondence With the BTH Committee vii
Summary of Changes viii

Chapter 1 Scope and Definitions 1
1-1 Purpose 1
1-2 Scope 1
1-3 New and Existing Devices 1
1-4 General Requirements 1
1-5 Definitions 3
1-6 Symbols 5
1-7 References 8

Chapter 2 Lifter Classifications 12
2-1 General 12
2-2 Design Category 12
2-3 Service Class 13

Chapter 3 Structural Design 14
3-1 General 14
3-2 Member Design 16
3-3 Connection Design 22
3-4 Fatigue Design 28
3-5 Other Design Considerations 39

Chapter 4 Mechanical Design 40
4-1 General 40
4-2 Sheaves 40
4-3 Wire Rope 41
4-4 Drive Systems 42
4-5 Gearing 43
4-6 Bearings 43
4-7 Shafting 45
4-8 Fasteners 47
4-9 Grip Ratio 47
4-10 Vacuum Lifting Device Design 47

Chapter 5 Electrical Components 49
5-1 General 49
5-2 Electric Motors and Brakes 49
5-3 Limit Switches, Sensors, and Push Buttons 50
5-4 Controllers and Rectifiers for Lifting Device Motors 50
5-5 Grounding 51
5-6 Power Disconnects 51
5-7 Batteries 52

Figures

C3-1	Selected Examples of Table 3-1 Requirements	22
C3-2	Block Shear	24
C3-3	Pin-Connected Plate Notation	25
C3-4	Stiffened Plate Lifting Beam	26
4-1	Sheave Dimensions	41
4-2	Sheave Gap	41

Tables

2-1	Service Class	13
C2-1	Service Class Life	13
C3-1	Design Category A Static Load Spectrum	15
C3-2	Design Category A Dynamic Load Spectrum	15
C3-3	Design Category B Static Load Spectrum	15
C3-4	Design Category B Dynamic Load Spectrum	15
3-1	Limiting Width-Thickness Ratios for Compression Elements	18
3-2	Minimum Effective Throat Thickness of Partial-Penetration Groove Welds	27
3-3	Minimum Sizes of Fillet Welds	28
3-4	Allowable Stress Ranges, ksi (MPa)	29
3-5	Fatigue Design Parameters	30
4-1	Strength Factors for Calculating Load Capacity (American Standard Tooth Forms)	44
4-2	L_{10} Life	44
4-3a	Key Size Versus Shaft Diameter (ASME B17.1)	45
4-3b	Key Size Versus Shaft Diameter (DIN 6885-1)	45
4-4	Fatigue Stress Amplification Factors	46
