EUROPEAN STANDARD **EN 50392**

NORME EUROPÉENNE

EUROPÄISCHE NORM January 2004

ICS 13.280

English version

Generic standard to demonstrate the compliance of electronic and electrical apparatus with the basic restrictions related to human exposure to electromagnetic fields (0 Hz - 300 GHz)

Norme de base pour démontrer la conformité des appareils électriques et électroniques, aux restrictions de base pour l'exposition du corps humain aux champs électromagnétiques (0 Hz - 300 GHz)

Fachgrundnorm zur Demonstration der Konformität elektronischer und elektrischer Geräte mit den Basisgrenzwerten für die Exposition von Personen gegenüber elektromagnetischen Feldern (0 Hz - 300 GHz)

This European Standard was approved by CENELEC on 2003-09-23. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the Central Secretariat has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This European Standard was prepared by the Technical Committee CENELEC TC 106X, Electromagnetic fields in the human environment.

The text of the draft was submitted to the Unique Acceptance Procedure and was approved by CENELEC as EN 50392 on 2003-09-23.

The following dates were fixed:

- latest date by which the EN has to be implemented at national level by publication of an identical national standard or by endorsement	(dop)	2004-10-01
- latest date by which the national standards conflicting with the EN have to be withdrawn	(dow)	2006-10-01

Contents

1 Scope 5
2 Normative references 5
3 Terms, definitions 6
4 Compliance criteria 9
5 Assessment methods 9
6 Evaluation of compliance to limits 10
7 Applicability of compliance assessment methods 10
7.1 Characteristics and parameters of apparatus to be considered 11
7.2 List of possible assessment methods 12
7.3 Decision tree (Assessment applicability table versus equipment characteristics) 13
7.3.1 Generic procedure for assessment of apparatus 13
8 Sources with multiple frequencies 14
8.1 Harmonics, pulses and non-sinusoidal fields 15
8.1.1 Introduction 15
8.1.2 Frequency range from 1 Hz - 10 MHz 15
8.1.3 Frequency range from 100 kHz - 300 GHz 18
9 Assessment report 19
9.1 General 19
9.2 Items to be recorded in the assessment report 19
9.2.1 Assessment method 19
9.2.2 Presentation of the results 20
9.2.3 Equipment using external antennas 20
10 Information to be supplied with the apparatus 20
Annex A (informative) Field calculation 21
A.1 Purpose 21
A.2 Far-field region 21
A.3 Radiating near-field region 21
A.4 Reactive near field region 22
A.4.1 Typical antenna examples 24
A.4.2 Discussion 24
A.4.3 Conclusion 24
A.5 Example of calculations within field regions at 900 MHz 25
Annex B (informative) SAR compliance assessment 26
B.1 Whole body SAR 26
B.1.1 Introduction 26
B.1.2 Whole-body SAR implicit compliance 26
B.2 Localised SAR 26

This is a free page sample. Access the full version online.

Annex C (informative) Information for numerical modelling 28
C.1 Introduction 28
C.2 Anatomical models 28
C.2.1 The Visible Human Project 28
C.2.2 “MEET Man” 28
C.2.3 “Hugo” 28
C.2.4 “Norman” 28
C.2.5 University of Utah 29
C.2.6 University of Victoria 29
C.3 Simpler, homogeneous body models 29
C.4 Electrical properties of tissue 30
C.5 Calculation of the induced electric current density 34
C.6 Representation of measured magnetic field distributions by equivalent sources 36
C.7 Induced current densities for different sizes of prolate spheroid 37
C.7.1 Uniform magnetic field source 37
C.7.2 Modelling results for a 60 cm by 30 cm Prolate Spheroid 38
C.7.3 Modelling results for a 120 cm by 60 cm Prolate Spheroid 39
C.7.4 Modelling results for a 180 cm by 80 cm Prolate Spheroid 40
C.8 Induced current densities for the human body and hand (informative) 41
C.8.1 Uniform magnetic field 41
C.8.2 Non-uniform magnetic fields and calculation of the coupling factor *k* 42
C.9 References 44
Annex D (informative) Measurements of physical properties and body currents 45
D.1 Measurement of body current 45
D.2 Measurement of induced body currents 45
D.3 Measurement of contact current 46
D.4 Measurement of touch voltage 46
D.5 References 47
Annex E (informative) SAR 48
E.1 Specific Absorption Rate (SAR) measurement procedures 48
E.1.1 Electric field measurement procedures 48
E.1.2 Temperature measurement procedures 48
E.1.3 Calorimetric measurement procedures 48
Annex F (informative) Measurement of E & H field 50
F.1 Measurement of external electromagnetic fields 50
F.1.1 General considerations 50
F.1.2 Equivalent field strength 50
Annex G (informative) Source modelling 52
G.1 Numerical modelling 52
G.1.1 Description of available methods 52
G.2 Field strength calculations 53
G.3 Specific absorption rate calculations 53
Bibliography 54
