Australian/New Zealand Standard™

Industrial, scientific and medical (ISM) radio-frequency equipment—
Electromagnetic disturbance characteristics—Limits and methods of measurement

AS/NZS CISPR 11:2004

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 24 March 2004 and on behalf of the Council of Standards New Zealand on 16 April 2004. It was published on 7 June 2004.

The following are represented on Committee TE-003:

Australian Broadcasting Authority Australian Broadcasting Corporation Australian Chamber of Commerce and Industry **Australian Communications Authority** Australian Electrical and Electronic Manufacturers Association Australian Information Industry Association CSIRO Telecommunications and Industrial Physics Commercial Television Australia Department of Defence (Australia) **Electrical Compliance Testing Association** Institution of Engineers Australia Ministry of Economic Development (New Zealand) SingTel Optus Society of Automotive Engineers—Australasia Telstra Corporation University of Western Australia Wireless Institute Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference to supersede AS/NZS CISPR 11:2002.

This Standard is identical with, and has been reproduced from, CISPR 11:2003, Industrial, scientific and medical (ISM) radio-frequency equipment—Electromagnetic disturbance characteristics—Limits and methods of measurement.

The objective of this Standard is to identify limits and methods of measurement of electromagnetic disturbance characteristics in ISM radio frequency equipment.

The terms 'normative' and 'informative' are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

As this Standard is reproduced from an international standard, the following applies:

- (a) Its number appears on the cover and title page while the international standard number appears only on the cover.
- (b) In the source text 'this International Standard' should read 'this Australian/New Zealand Standard'.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

CONTENTS

		,	Page
1	Gene	eral	1
	1.1	Scope and object	1
	1.2	Normative references	1
2	Defin	nitions	2
3	Freq	uencies designated for ISM use	3
4	Class	sification of ISM equipment	3
	4.1	Separation into groups	3
	4.2	Division into classes	4
5	Limit	s of electromagnetic disturbances	4
	5.1	Limits of terminal disturbance voltage	4
	5.2	Limits of electromagnetic radiation disturbance	7
	5.3	Provisions for protection of safety services	13
	5.4	Provisions for protection of specific sensitive radio services	13
6	Gene	eral measurement requirements	13
	6.1	Ambient noise	14
	6.2	Measuring equipment	14
	6.3	Frequency measurement	16
	6.4	Configuration of equipment under test	16
	6.5	Load conditions of equipment under test	18
7	Spec	sial provisions for test site measurements (9 kHz to 1 GHz)	20
	7.1	Measurement of mains terminal disturbance voltage	21
	7.2	Radiation test site for 9 kHz to 1 GHz	22
	7.3	Alternative radiation test sites for the frequency range 30 MHz to 1 GHz	23
8	Radiation measurements: 1 GHz to 18 GHz		
	8.1	Test arrangement	23
	8.2	Receiving antenna	23
	8.3	Validation and calibration of test site	23
	8.4	Measuring procedure	23
9	Meas	surement in situ	24
10	Safe	ty precautions	24
11	Asse	ssment of conformity of equipment	24
	11.1	Statistical assessment of compliance of series produced equipment	24
	11.2	Equipment in small-scale production	25
	11.3	Equipment produced on an individual basis	25
