

AS 2118—1982

Australian Standard[®]

**SAA Code for Automatic fire
sprinkler systems**

This Australian standard was prepared by Committee FP/4, Automatic Sprinkler Installations. It was approved on behalf of the Council of the Standards Association of Australia on 13 April 1982 and published on 19 July 1982.

The following interests were represented on the committee responsible for the preparation of this standard:

Association of Consulting Engineers (Victorian Chapter)
Australian Fire Protection Association
Australian Water and Sewerage Authorities
Board of Fire Commissioners of New South Wales
Building Owners and Managers Association of Australia
Commonwealth Fire Board
Confederation of Australian Industry
Department of Transport and Construction
Experimental Building Station
Fire Protection Industry Association of Australia
Insurance Council of Australia
Metropolitan Fire Brigades Board, Melbourne
Telecom Australia

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

AS 2118—1982

Australian Standard[®]

**AUTOMATIC FIRE SPRINKLER
SYSTEMS**

known as the

**SAA CODE FOR AUTOMATIC
FIRE SPRINKLER SYSTEMS**

First edition (endorsement of Seventh edition of FOC Rules) (AS CA16)	1939
Second edition (endorsement of Eighth edition of FOC Rules)	1948
Endorsement withdrawn	1957
Third edition (endorsement of Ninth edition of FOC Rules)	1962
Fourth edition (based on 29th edition of FOC Rules)	1971
Supplement No 1 (metric)	1974
Revised and issued as AS 2118	1978
Second edition	1982

Incorporating:
Amdt 1—1983
Amdt 2—1985
Amdt 3—1989

PREFACE

This edition of this standard was prepared by the Association's Committee on Automatic Sprinkler Installations to supersede AS 2118—1978.

Periodic test and maintenance procedures are specified in AS 1851, Maintenance of Fire Protection Equipment, Part 3 — Automatic Fire Sprinkler Systems.

This edition places an area limitation on extra light hazard occupancies. This should not be taken to imply that there was any technical deficiency in the earlier classification. The action was taken to align AS 2118 more closely with the Rules of the (U.K.) Fire Offices' Committee for Automatic Sprinkler Installations, and with other overseas standards. For this reason, the area limitation on extra light hazard occupancies should not be applied retrospectively.

Revisions and additions contained in the two published amendments to AS 2118-1978, together with other revisions and additions approved by the committee have been incorporated in this edition. Other changes are editorial only. The clauses, tables and figures which have been subject to technical change or addition subsequent to Amendment No 2 to AS 2118-1978 are listed in Annex 2. Particular changes have been introduced in the following areas:

Clause 2.2.2 — distinguishes between the classification of extra light hazard and ordinary hazard Group 1 systems.

Clause 2.3.2.6 — introduces tail-end and anti-freezing solution systems.

Clause 4.4.1 — a new note outlines conditions where the water supply for both automatic sprinkler and fire hydrant services may be combined.

Clause 4.8.1 — amends suction tank refilling times.

Clause 5.6.18 — specifies the location of sprinklers in air-handling plants.

Clause 5.6.19 — details sprinkler protection in areas where computers are installed.

Clause 10.4.2.2 — expands on methods for pre-calculation of pipework for ordinary hazard class systems.

Clause 11.1.3 — expands on methods of storage, general design data and intermediate level sprinklers for extra high hazard class systems.

Clause 11.2.1 — modifies the flow requirements of sprinklers within racks.

Appendix D — added to clarify terminology applied to pipework.

Appendix E — added to provide parameters for full hydraulic calculation of extra light and ordinary hazard class systems.

AMENDMENTS

When clauses, etc are amended (or otherwise altered, added to, or deleted), the relevant pages will be reprinted, and the Code user will be invited to substitute these pages for the existing pages. Each page as presently printed carries a key to the date of publication, located at the bottom of the page, in the form year, month and day, plus the letters 'FP' for first printing in this edition, thus: 1982-07-19 FP.

When an amendment is issued the relevant pages will carry a similar key located under the first one with a reference to the amendment; for example, 1982-11-01 A1 (for Amendment No 1). The amended portion will be indicated by means of a marginal rule with the letters A1, etc alongside.

A batch of altered pages will be accompanied by a summary sheet, which users may file at the back of the Code for reference. In addition the Code includes a general record sheet for amendments, etc.

It is strongly recommended that users, when quoting a particular requirement in the Code, state the clause number, page number, and the last printing key (i.e. the bottom one in a sequence).

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

	<i>Page</i>		<i>Page</i>
PART 1 - SCOPE, DEFINITIONS, CLASSIFICATION AND DESIGN DATA		5.5	Spacing and Location of Sidewall Sprinklers 5—4
SECTION 1. SCOPE AND DEFINITIONS		5.6	Location or Conditions involving Special Consideration (Supplementary Protection) 5—4
1.1	Scope 1—1	5.7	Obstructions below Sprinklers 5—7
1.2	Definitions 1—1	5.8	Film and Television Production Studios 5—7
1.3	Referenced Documents 1—3	5.9	Theatres and Music Halls 5—8
SECTION 2. CLASSES OF SPRINKLER SYSTEM AND DESIGN DATA		5.10	Cold Storage Warehouse 5—8
2.1	Classes of System 2-1	SECTION 6. SPRINKLERS, SPRAYERS AND MULTIPLE CONTROLS	
2.2	Classification of Occupancies 2-1	6.1	General 6—1
2.3	Types of Systems 2-6	6.2	Types of Sprinklers, Sprayers and Multiple Controls 6—1
2.4	Design Data 2-8	6.3	Sprinkler <i>K</i> Factors, Orifice and Thread Sizes 6—2
PART 2 — GENERAL REQUIREMENTS		6.4	Application of Sprinkler Types 6—2
SECTION 3. INSTALLATION		6.5	Temperature Ratings 6—2
3.1	Confirmation of Class of Hazard 3—1	6.6	Colour Coding 6—2
3.2	Information to be Provided for Approval of Sprinkler Systems 3—1	6.7	Stock of Replacement Sprinklers 6—2
3.3	Sprinklered Buildings 3—3	6.8	Anti-corrosion Treatment of Sprinklers 6—3
3.4	Transmission of Alarm Signal to Fire Brigade 3—4	6.9	Sprinkler Guards 6—3
3.5	Local Alarm 3—4	6.10	Escutcheon Plates 6—3
3.6	System Monitoring 3—4	6.11	Protection from Frost 6—3
3.6	Maintenance 3—5	SECTION 7. PIPEWORK	
SECTION 4. WATER SUPPLIES		7.1	Pipe and Pipe Fitting Specifications 7—1
4.1	General 4—1	7.2	Hydraulic Test Pressure 7—1
4.2	Acceptable Sources of Supply 4—1	7.3	Pipe Jointing 7—1
4.3	Water Supply Grades 4—1	7.4	Embedding of Pipework 7—1
4.4	Connections to Other Services 4—12	7.5	Corrosion Protection of Pipework 7—1
4.5	Pressure and Flow Requirements 4—13	7.6	Pipework in Unsprinklered Buildings 7—2
4.6	Pressure Limitations 4—13	7.7	Protection of Pipework Against Mechanical Damage 7—2
4.7	Minimum Capacity of Stored Water Supplies 4—13	7.8	Hazardous Processes and Explosion Hazard — Special Precautions concerning Pipework and Valves 7—2
4.8	Pump Suction Tanks 4—13	7.9	Facilities for Flushing Pipework 7—2
4.9	Private Water Supplies 4—16	7.10	Prohibited Use of Pipework 7—2
4.10	Town Mains 4—17	7.11	Slope of Pipes for Drainage 7—2
4.11	Pump Installations 4—17	7.12	Low Level Drainage 7—2
4.12	Pump Sets 4—22	7.13	Pipe Sizes 7—2
4.13	Pressure Tanks 4—24	7.14	Orifice Plates 7—2
4.14	Proving of Water Supplies 4—25	7.15	Support of Sprinkler Pipework 7—3
SECTION 5. SPACING AND LOCATION OF SPRINKLERS		SECTION 8. VALVES AND ANCILLARY EQUIPMENT	
5.1	Standard Spacing 5—1	8.1	Installation Control Valves 8—1
5.2	Staggered Spacing 5—1		
5.3	Minimum Distance between Sprinklers 5—1		
5.4	Location of Sprinklers 5—1
