HB 239:2011

Handbook

Guidance on the repair and overhaul of electrical equipment for explosive atmospheres

### HB 239:2011

This Joint Australian/New Zealand Handbook was prepared by Joint Technical Committee EL-023, Electrical Equipment in Mines. It was approved on behalf of the Council of Standards Australia on 8 December 2010 and on behalf of the Council of Standards New Zealand on 1 July 2011. This Handbook was published on 19 July 2011.

The following are represented on Committee EL-023:

Australian Chamber of Commerce and Industry Australian Coal Association Australian Industry Group Consult Australia Department of Industry and Investment NSW Department of Mines & Petroleum (WA) Department of Mines and Energy (Qld) Electrical Apparatus Service Association Mining Electrical and Mining Mechanical Engineering Society National Association of Testing Authorities Australia Queensland Department of Environment and Resource Management Solid Energy New Zealand The Aviation and Marine Engineers Association University of Newcastle WorkCover New South Wales

### Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

### PREFACE

This Handbook was prepared by Standards Australia/Standards New Zealand Committee EL-023, Electrical Equipment in Mines.

The objective of this Handbook is to provide practical guidance for the overhaul and repair of electrical equipment for explosive atmospheres. It contains performance-based information on process and procedures that have been part of AS/NZS 3800 that may not transfer to the revised 2011 version IEC 60079.19, the recognised international Standard for the repair and overhaul of explosion-protected electrical equipment. Additionally, information on the key processes for the repair of reeling and trailing cable is included.

The Handbook offers additional guidance regarding techniques and special processes necessary to ensure consistent and reliable delivery of repaired and overhauled equipment and cables. Also included are appendices covering quality management systems, measurement and calibration, and history of equipment and service facilities approval schemes.

The Handbook has been written to assist repair facilities, owners and operators of electrical equipment in explosive atmospheres.
