Australian Standard™

The demolition of structures

This Australian Standard was prepared by Committee BD-059, Demolition of Structures. It was approved on behalf of the Council of Standards Australia on 13 July 2001 and published on 13 September 2001.

The following interests are represented on Committee BD-059:

Construction, Forestry, Mining and Energy Union

Consumers Federation of Australia

Demolition Contractors Association of Australia

Demolition Contractors Association of New South Wales

Demolition Contractors Association of Victoria

Department of Urban Affairs and Planning (NSW)

Master Builders Australia

TAFE New South Wales

Association of Consulting Engineers Australia

University of New South Wales

WorkCover New South Wales

WorkSafe Western Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Standards Australia Committee BD-059, Demolition of Structures, to supersede AS 2601—1991.

The objective of this Standard is to provide guidance to planners, engineers, contractors and interested parties on the planning and procedures for the demolition of a structure.

In revising the Standard, the Committee has taken into account experience gained in the application of the second edition, the relative prevalence of the types of structures now being demolished and the increasing trend towards the mechanization of demolition procedures. An increase of public awareness and worker expectations regarding safety issues, as well as increased concern regarding protection of the environment have also been taken into account as well as ecologically sustainable developments. Also addressed has been the changing face of the construction industry in terms of legislative requirements and the trend towards privatization of certifiers and the decrease in the input from regulatory authorities.

The following brief outline indicates the principal changes from the previous edition.

- Reorganization of contents The Standard has been reorganized so as to be more performance based. The prescriptive items regarding the method for demolishing certain structures has been relocated to an informative appendix, as the committee realizes that there may be more appropriate means of achieving the safe falling of a structure, which requires the contractor to understand and apply risk management when considering a new job. The prescriptive requirements in relation to protection and the health and safety of employees and the public has been retained.
- 2 **Planing and execution** The Standard places an emphasis on the planning and execution of a demolition project. The requirements for planning and execution have been expanded upon, which has resulted in the addition of a new Section (see Section 2).
- Regulating Authorities The Standard has taken account the varying requirements of regulating authorities in the States and Territories, and has addressed this by the removal of regulatory requirements from the main body of the Standard. An appendix has been added for guidance. The Appendix places emphasis on the demolition contractor to ensure work is carried out in accordance with the requirements of the State or Territory, as applicable. The guidance is current at the time of publication. However, it is the demolition contractor's duty to ensure that the relevant requirements of authority and qualifications are current.

The term 'informative' has been used in this Standard to define the application of the appendix to which it applies. An 'informative' appendix is for information and guidance only.
