Australian Standard™

Non-return valves for waterworks purposes—Swing check and tilting disc

This Australian Standard was prepared by Committee WS-022, Valves for Water Supply Purposes. It was approved on behalf of the Council of Standards Australia on 21 December 2000 and published on 27 February 2001.

The following interests are represented on Committee WS-022:

Association of Consulting Engineers Australia
Australian Chamber of Commerce and Industry
Australian Chamber of Manufactures
Australian Valve Manufacturers Association
Department of Natural Resources (Qld)
Local Government New Zealand
Master Plumbers Australia
Metal Trades Industry Association of Australia
Society of Mechanical Engineers of Australasia

Water Services Association of Australia (WSAA)

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee WS-022, Valves for Water Supply Purposes.

The objective of this Standard is to provide design and performance requirements for manufacturers of non-return valves. It includes Class 16 and 35 valves for use in water and sewerage systems.

Attention is drawn to the proposed publication of SAA/SNZ Rul PL/2, Rulings to the Joint Australian/New Zealand non-return valves for waterworks purposes. Where rulings of public significance are issued, they will be available from Standards Australia through a subscription service. When rulings are included in an amendment, the specific ruling will be withdrawn at the time of publication of the amendment. Enquiries should be directed to Standards Australia.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Standard.

Support and contribution is acknowledged from the Water Services Association of Australia (WSAA).

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.
