Australian Standard®

Non-destructive testing—Penetrant testing of products and components

This Australian Standard was prepared by Committee MT/7, Non-destructive Testing of Metals and Materials. It was approved on behalf of the Council of Standards Australia on 12 September 1997 and published on 5 December 1997.

The following interests are represented on Committee MT/7:

Australasian Railway Association

Australian Aerospace Non-Destructive Testing Committee

Australian Institute for Non-Destructive Testing

Australian Nuclear Science and Technology Organization

Australian Pipeline Industry Association

AUSTROADS

Bureau of Steel Manufacturers of Australia

Electricity Supply Association of Australia

Industrial Research Limited, New Zealand

Institution of Engineers, Australia

Metal Trades Industry Association of Australia

National Association of Testing Authorities, Australia

New Zealand Non-Destructive Testing Association

Society of Automotive Engineers — Australasia

Victorian WorkCover Authority

Welding Technology Institute of Australia

WorkCover New South Wales

Additional interests participating in preparation of Standard:

Aircraft maintenance laboratories

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

Australian Standard®

Non-destructive testing—Penetrant testing of products and components

Originated in part as AS B260.3A—1968 (being endorsement of BS 3889.3A:1965 with Amendment).

Previous editions AS 2062—1977 and AS 2565—1982.

AS 2062—1977 and AS 2565—1982 revised, amalgamated and designated AS 2062—1997.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee MT/7, Non-destructive Testing of Metals and Materials, to supersede AS 2062—1977, Methods for non-destructive penetrant testing of products and components.

This Standard is the result of a consensus among Australian and New Zealand representatives on the Joint Committee to produce it as an Australian Standard.

The objective of this revision is to upgrade the requirements for penetrant testing of non-porous products and components for the detection of discontinuities that are open to the surface. The Standard covers both site and factory testing.

This Standard now requires that all materials comply with MIL-I-25135E—1989, *Inspection materials, Penetrants*. As a result, AS 2565—1982, *Non-destructive testing—Penetrant testing media*, is to be withdrawn.

During the preparation of this revision, cognizance was taken of the following International and National Standards:

ISO

3452 (1984): Non-destructive testing—Penetrant inspection—General principles

3453 (1984): Non-destructive testing—Liquid penetrant inspection—Means of verification

ASTM

E 1417-95a Practice for liquid penetrant examination

Members of the committee were in agreement that this Standard should align with ASTM E 1417, which is more up-to-date than the two international Standards.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.
